What can I confidently say? Try this....

“Bob, when bleeding gums are present, like you have in your mouth, research shows that these dangerous bacteria enter your blood stream.

There is mounting evidence that these bacteria will travel throughout your body, putting you at risk for a number of conditions such as CVD, Stroke, RA, Dementia, Diabetes, (Adverse Pregnancy Outcomes) and even some cancers.

In our office, we recommend Periodontal Therapy, which is a treatment aimed at controlling these bacteria and reducing your risk, however, the treatment is only successful if you keep your scheduled visits and participate by stepping up your oral care at home.”
